

CLEAN TECH  
COMPETITION

2019: Toward a Greener Tomorrow

***\$10,000 Grand Prize***

Even in the midst of the current climate crisis, there are still more ways to make a positive change than a negative one. Therefore, we are asking you, the scientists of tomorrow, to make that greener future a reality.

## The Reason

## The Challenge

This year's "Spellman Clean Tech" challenge is to identify an issue in one of two categories: **Mitigating the Effects of Climate Change**, and **Resource Preservation**. You will need to research, test, and retest your hypothesis to find the most efficient solution. Your team will explain in detail the specifics of your creation, and the top teams will be asked to create a prototype to present at our finals competition in July 2019.

**Registration open now!**
